

## **Shenzhen RF Intelligent RFID Performance Dynamic Test Center**

### **TEST CENTER DESCRIPTION:**

Shenzhen RF Intelligent Test Center includes Frequency parameter testing and RFID products scene application which imitates the application in actual supplier chain, storage in warehouse and so on. Also we can design the special scene application as the demanding of our clients and customers.

Our Test Center also offers various services for customers or the company and community that interested in RFID information. We provide the basic training, equipment training, software training and the special training as the requirements of customers. On the website, we have the column that answers all questions for questioners. So far, there are lots of visitors who come to our Test Center and give us some valuable suggestions.

### **SERVICES/SOLUTIONS:**

**Dynamic Test** – Dynamic Test is the purpose of simulating the actual supply chain or other application, so the data obtained from testing is valuable and important, also can improve the performance of RFID tags and readers.

- **Dock Door Portal Test:** Test the reading performance of RFID tags attached to cases or pallets when they pass through the portal with standard test methods.
- **Conveyer Portal Test :** Test the reading performance of RFID tags attached to different types of cases or others as they pass through the Conveyer Portal with standard test methods in actual supply chain implementations.

**Consulting** – In order to meet our customers' requirements, we offer the RFID application consulting and reference information consulting.

- **RFID application Consulting** – Introduce the purpose and application of every part of PTC test centre by our test engineers, and perform the Door portal dynamic test and Conveyer portal dynamic test.

- **RFID technology Consulting** – Answer all questions for customers include tags, readers, antenna, and the basic principle of RFID and so on.

**Education/ Training** – provided variety of trainings for customers, and also customers can request a specified course for themselves.

- **Basic training** – includes RFID component to systems, standard to certification, plans to implementation.
- **Equipment training** – includes spectrum analyzer training, network analyzer training and power meter training etc.
- **Software training** – includes Door Portal Test Software and Conveyor Portal Test Software.

### **INDUSTRY VERTICALS SERVED:**

- ✓ RFID manufacture
- ✓ RFID Vender
- ✓ Retail

### **AWARDS/KEY ACHIEVEMENTS:**

- ✓ Lots of visitors come to our test centre;
- ✓ Lots of testing for products of Invengo.
